

When you (or your clients) visit a schedule with a mobile device, such as an iPhone or Android, the system will automatically show a version optimized for handheld devices. You can also display your calendar using an icon on the home screen of an iPad or iPhone, see the information on [mobile devices](#) for details.

Putting your schedule on the home screen on an iPhone or iPad

If you frequently visit your appointment schedule on an iPhone or iPad, it can be convenient to be able to launch it from an icon on the home screen of your iOS device. You can follow the steps underneath to create the shortcut.

Please note that there is no need to go to the App Store to download an app to do this.

[Click to enlarge and play video](#)

- Visit the link to your appointment schedule in the Safari browser on your iPhone or iPad.
- When the page has finished downloading, click  (or  on devices with older versions of iOS) and select the option **Add to Home Screen** from the menu that appears.
- A SuperSaaS icon will appear on the home screen of your iPhone or iPad, as if it were an app. You can do this multiple times if you have multiple schedules. Clicking it will open your schedule.
